# GuestSafe 2001

The GuestSafe system is a fully integrated visitor security solution for the medium sized facility. GuestSafe acquires visitor metrics and produces a unique security pass in seconds. GuestSafe is streamlined to allow maximum processing throughput.

GuestSafe is fast and easy to use. With our one click or one touch pass printing, passes are ready for use in seconds. The system's interface is intuitive and basic so anyone can use it.

Picture shows premium edition.

GuestSafe has a minimum of 4 security detail points to enter. These can include badge type, identification, point of contact, and destination.

GuestSafe can produce most types of passes. Many varieties of passes are preprogrammed. Some common examples include: photo id badges, vehicle window tags, and equipment/parcel security check labels.

Color and B&W card badges shown.

GuestSafe has capabilities of capturing extra data for enhanced security. Extra channels of acquisition allow for vehicle data to be captured for security tracking.

Automobile acquisition.

GuestSafe is fully capable of making use of leading edge equipment. This allows for automatic acquisition of data and production highly secure passes. With printing speeds of 900 documents per hour for paper stock, and 144 color cards per hour, there are no faster ways.

Our printer technology is leading edge.

GuestSafe stores all data collected in a high performance networked database. This allows for rapid recall of information. Our fault-tolerant design allows any terminal to be promoted to be the "primary" incase of system fault.

Backup and archiving of the system can be scheduled and automatic. The high-resolution image data is maintained until it is archived to a lower resolution. Backup formats are designed to be compatible with 3rd party application, like MS Office™

The system uses 128-bit encryption. This level of encryption prevents unauthorized access to the data. Administrators and security personnel have immediate access to real-time reports generated by the system using only a web browser. Report examples include visitor photos by sector, vehicles per day, visitors received by department per week.

GuestSafe is designed with integration to legacy systems in mind. Let this system replace your old system or just supplement it. We use industry standard methods for database development and security.

Our entire system is documented. Our user manuals are designed with quick reference section. The administrator manuals focus on report running and generation, system maintenance, and equipment replacement. Also

provided is a developer API, conforming to OSS conventions.

GuestSafe is unparalleled when it comes to user serviceability. The API allows for in-house developers or consultants to extend the system. This guarantees GuestSafe will outlive any competitors system.

Or simplify every aspect of use, maintenance, and scalability. Buy a support contract. Get free upgrades. With on-call support staff, Pyerotechnics Development, Inc. is committed to making your experience as easy and simple as possible.

Product versions:
- GuestSafe Premium – *the most comprehensive*
- GuestSafe Standard – *the security standard*
- GuestSafe Lite – *just the basics*
- GuestSafe Custom – *tailored to you*

GuestSafe Lite includes one point of acquisition, and one printer per terminal. This package is designed for small enterprises and lower security facilities.

GuestSafe Standard includes two points (photo and document) of acquisition. Custom reports, using simple to use reporting language. Support for a printer and card printer.

GuestSafe Premium has it all, 4 points (photo, document, vehicle 1, vehicle 2/auxilary) of acquisition. Includes a touch screen to simplify use. The system includes a duplex printing card printer with magnetic strip or smart card encoding. The system is capable of automatic report faxing.

GuestSafe Custom is always exactly what you need. Call or write your local sales representative for more details:
